Lisensu Cx One

Lisensu Cx One

I searched around and was unable to find an answer So before I call Omron I thought I would check here.

So If I install CX-One on secondary laptop, and then try to update it via the web, am I going to have issues or violate the software agreement?Is this the right direction to go? Hope this makes sense.

If you have a site that has a machine that you can remote into, that is connected to the PLC network so that you can push these changes or updates or monitor a PLC for temporary troubleshooting purposes, can you 'push/pull' a license from a machine? Similarly this would be like sending a licensed laptop to a site/facility and having it connected to do the same tasks and then removing the laptop when the tasks are completed.. quirks device0= '0x0590:0x005b skip-reset, skip-refresh, skip-setconfig' Step 5: Restart VM.. I have one licensed install of CX-One installed on my notebook My notebook is going to be taken by our IT guy for updates and a new battery.. The question is essentially so that the end user does not have access to 'mess something up' and to save the developer (us) from having to purchase a license for every job when we own licenses for development/troubleshooting.. Hey Jay, I understand that there are no checks of the hardware when installing the license onto another machine using the same license number and product id, but do you know if there is a process or good way to do the following without violating any license agreement: If you are a developer/integrator and you have your license to develop the application, then when you push the code to the PLC(s) you can use only your license to do so.
